PROFESSIONAL PROFILE

I am a highly motivated and disciplined **third-year undergraduate Software Engineering student** with strong practical experience in **full-stack web application development** using the **PERN stack (PostgreSQL, Express.js, React, Node.js)**. I have designed, implemented, and tested multiple real-world web applications that emphasize **scalability, performance, security, and user experience**.

My academic background has given me a solid foundation in **software development principles, data structures, database systems, and system design**, while my personal and team projects have strengthened my ability to transform business requirements into working software solutions. I am passionate about **clean code practices, RESTful architecture, and secure authentication systems**, and I actively seek opportunities to learn modern technologies and industry best practices.

I am currently seeking a **Full-Stack Developer Internship** where I can contribute my skills, collaborate with experienced engineers, and continue developing as a professional software engineer in a fast-paced, agile environment.

CAREER OBJECTIVE

To secure a **Full-Stack Developer Internship** in a growth-oriented technology company such as **Doxa Innovations**, where I can apply my knowledge of full-stack web development, gain hands-on industry experience, and contribute to building reliable, user-centric software systems while continuously improving my technical and professional skills.

TECHNICAL SKILLS

Programming Languages

- JavaScript (ES6+)
- HTML5
- CSS3
- Java
- C++

Frontend Development

- React.js (functional components, hooks, component-based architecture)
- Tailwind CSS
- Responsive Web Design
- UI state management
- API integration using Axios / Fetch

Backend Development

- Node.js
- Express.js
- RESTful API design and implementation
- JSON Web Token (JWT) authentication
- Firebase Authentication
- Middleware implementation
- Secure request handling and validation

Databases

- PostgreSQL
- MySQL
- Relational database design
- CRUD operations
- Data normalization and query optimization

Tools & Platforms

- Git & GitHub (version control, collaboration)
- Postman (API testing)
- Visual Studio Code
- WebSockets
- MVC Architecture
- Agile development concepts

PROJECT EXPERIENCE

Real-Time Chat Application

Technologies: React, Node.js, Express.js, JWT, WebSockets

- Designed and developed a real-time messaging application enabling authenticated users to communicate instantly.
 - Implemented secure JWT-based authentication and authorization.
 - Integrated WebSockets to support real-time message delivery without page refresh.
 - Built a responsive and intuitive user interface using React.
 - Ensured proper error handling, input validation, and secure API communication.
-

Full-Stack Blog Platform

Technologies: React, Express.js, PostgreSQL

- Developed a full-stack blogging platform allowing users to create, edit, and delete blog posts.
 - Implemented user authentication and protected routes.
 - Designed PostgreSQL database schema to manage users, posts, and comments.
 - Built RESTful APIs to handle backend operations.
 - Focused on clean code structure and scalability.
-

E-Commerce Website

Technologies: React, Node.js, Express.js

- Built an e-commerce application featuring product listing, shopping cart, and checkout flow.
 - Developed RESTful APIs for product and order management.
 - Designed a responsive UI optimized for both mobile and desktop users.
 - Applied modular component design for reusability and maintainability.
 - Focused on improving user experience and application performance.
-

Netflix Clone (Frontend Project)

Technologies: React, External APIs

- Created a Netflix-inspired user interface using React.
 - Integrated external APIs to fetch and display dynamic movie and TV show content.
 - Implemented responsive layouts and reusable components.
 - Focused on performance optimization and clean UI design.
-

Evangadi Forum – Q&A Platform

Technologies: Node.js, Express.js, MySQL

- Developed a StackOverflow-style question-and-answer platform.
 - Implemented user registration, login, and authentication using JWT.
 - Designed MySQL database schema to manage users, questions, and answers.
 - Built APIs for posting, retrieving, and managing content.
 - Applied relational database concepts to ensure data integrity.
-

Garage Management System

Technologies: React, Express.js

- Built a management system for handling vehicle services and customer records.
 - Implemented CRUD operations for customers, vehicles, and service history.
 - Designed backend APIs for efficient data handling.
 - Improved operational workflow through structured data storage.
-

EDUCATION

Bachelor of Science in Software Engineering

Third-Year Undergraduate

XYZ University, Ethiopia

- Relevant Coursework:
 - Data Structures and Algorithms
 - Database Systems
 - Software Engineering
 - Web Development
 - Computer Networks
-

SOFT SKILLS

- Strong problem-solving and analytical skills
 - Effective communication and teamwork
 - Time management and task prioritization
 - Adaptability and quick learning ability
 - Attention to detail and code quality
-

AREAS OF INTEREST

- Full-Stack Web Development
 - Backend Architecture and API Design
 - UI/UX Design
 - Database Optimization
 - Scalable and Secure Web Systems
-

ADDITIONAL INFORMATION

- Familiar with Agile and Scrum methodologies
- Experience working on individual and team-based projects
- Strong interest in continuous learning and professional growth
- Actively building and improving personal projects on GitHub
